Toucan Touchscreen Gauge and CAL Selection Unit
User Guide (Syvecs) – Addendum 1
Subaru CAL Switch Wiring

The CAL switch for Subaru S6PnP ecu's is usually wired to the green “test” connector located above the pedal box, near the steering column, as shown here:

One of these is simply a ground connection, the other is the CAL selection signal.

A short adapter cable is available to allow the toucan CAL wire to be directly plugged in to the correct connector, but if you want to wire directly to this connector, it is the female/receptacle connector that you need to connect to, as shown here.
